What Others Say

The "*Willingness*" of Daylilies means more to me than just a good quality—for upon it rests largely whether I am to have the beauty of flowers during the summer.

An obligation makes it impossible to work in the garden as I should like to do. For years, before I knew of Daylilies, we simply reconciled ourselves to weeds and shrilling insects.

Your Daylilies have therefore been a real gift to us and we are truly grateful.

Mrs. Wm. Allen Wood, Indianapolis 5, Indiana

WHY "WILLING"

Mrs. Wood finds Stout Hybrid Daylilies "willing" because:

- They bloom in spite of poor soil, droughts and neglect.
- They are not attacked by diseases, insect pests or rodents.
- They thrive in the hottest and coldest climates.
- They include a wide range of new types and new colors for dependable and ever increasing bloom, from spring to fall.

Reduce your garden labor and increase your garden's beauty—with "willing" Stout Hybrid Daylilies.
